

SECURITY SOLUTIONS ADDRESSING THE NEW BUSINESS AND IT SECURITY LANDSCAPE

Protecting one of the most valuable assets to your business—your data and information—in an increasingly complex IT environment, and on a limited budget, is a challenge. With today's multi-faceted attacks targeting your organization's Web browsers, email and applications, a more comprehensive and manageable security approach is needed in order to enforce an effective strategy.

BE PREPARED

Sirius provides a comprehensive approach to IT security by helping you protect every aspect of your organization. We know security relies on a combination of people, policies, procedures, technology controls, and a proactive approach to understanding and managing risk, in order to:

- Ensure compliance, regardless of readiness
- Protect your company's reputation and market share
- Avoid costly breaches and fines
- Maintain the privacy of sensitive information
- Manage risk to enhance business agility and growth

WHICH SERVICES ARE RIGHT FOR YOU?

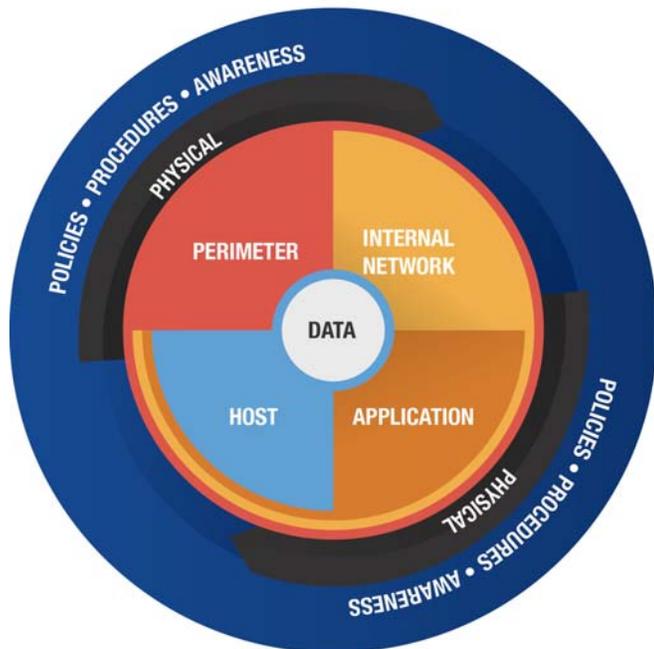

To ensure maximum business value, strategic alignment and operational efficiency, you have to ask yourself the following questions related to:

- **Security Program Development & Policy Creation:** Do we have an overall security strategy, and do we have effective security policies in place?
- **Governance, Risk & Compliance:** How can we improve our audit results, or streamline the audit process?
- **Compliance Readiness & Remediation:** What can we do to prepare for the compliance process?
- **Enterprise Security Assessments:** How does our security posture compare to best practices, and what are our potential vulnerabilities?
- **Application Security:** Are we at risk of a potential compromise of Web-facing applications?
- **Managed Security:** Is it a good idea to have someone actively manage and monitor our security for us?

Zone Defense

Sirius can help you address your security needs by developing a “zone defense” strategy for your business.

Creating security zones allows you to develop your security architecture in logical segments, applying the appropriate amount of controls to each area of your business data.

Your Sirius representative can help you consider questions and determine the best course of action for your organization.

SIRIUS SECURITY SOLUTIONS ENSURE BUSINESS VALUE

Sirius’ zone defense approach ensures maximum business value, strategic alignment and operational efficiency. We provide actionable recommendations to ensure the necessary controls are in place, address regulatory obligations, protect critical operations and assets, and limit exposure to risk.

We can help you address your security challenges, including:

Governance, Risk and Compliance

Sirius Governance, Risk and Compliance (GRC) solutions enable an efficient, collaborative program across IT, finance, operations and legal domains. An effective GRC solution can help manage risks, demonstrate compliance, automate business processes and give you visibility into corporate risk and security.

Managed Security Solutions

Sirius managed security services provide 24/7/365 monitoring and management of your security environment, helping you maintain service levels, cut costs and sustain an effective security posture.

Endpoint Protection

Sirius develops endpoint protection strategies that seamlessly integrate antivirus, antispyware, firewall, intrusion prevention and device and application control to protect your business from the latest threats and attacks.

Security Incident and Event Management (SIEM)

Sirius SIEM solutions save you time by automating the collection, analysis and correlation of event data so your business is more secure.

Data Security for Structured and Unstructured Data

Protecting data where it resides is a key step for creating a defense in depth strategy, and Sirius designs solutions that add a crucial layer of protection for your most valuable assets.

Identity and Access Management

Properly identifying employees, subcontractors, business partners and others in your data processing environment is a fundamental security function. Sirius identity and access management solutions help automate and reduce the complexity of this critical function.

Application Security

Application security solutions help ensure security is incorporated into the design, development, deployment, upgrades and maintenance of software applications.

OUR PARTNERS

Sirius works with a focused set of best-of-breed partners to assure expertise in architecture and implementation. We are vendor neutral, with a primary focus in understanding our client’s needs. We structure solutions that are appropriate for your needs, and include multiple options when possible.
