

# How to Easily Track and Manage Your Hardware and Software Maintenance

Hardware

Software

Security

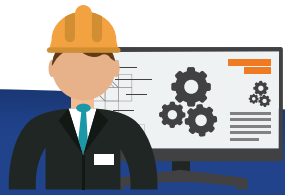

Monitoring

Backup/Recovery

A truly resilient maintenance solution allows you to track and manage your hardware and software coverage—as well as your security, monitoring and backup/recovery services—across multiple manufacturers.

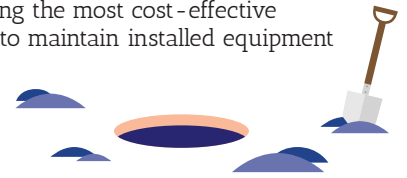

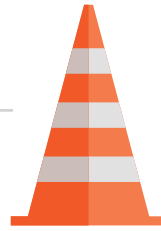

## The **SMART** way to maintain your technology investments

Sirius Maintenance and Renewal Tracking (**SMART**) is a propriety online asset management portal that allows you to track and manage your inventory and contracts online via secure login across multiple manufacturers.

### Maintenance pitfalls to avoid

- Equipment falling off of warranty
- Paying for maintenance on equipment out of productive use
- Contractual coverage not matching perceived coverage
- Overlooking the most cost-effective contracts to maintain installed equipment

## The **SMART** way to manage your inventory online

Stay current with important manufacturer updates, including pricing changes and end-of-life service announcement

Quickly review your hardware and software at the contract or serial number level

Easily update and track additional contracts and asset information

Immediately access expiration dates, service levels and warranty details

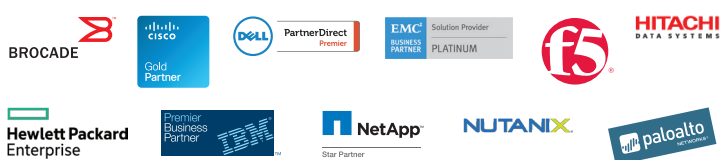

## Winner of the 2015 IBM Beacon Award for Outstanding Technical Support Services

Sirius Maintenance Services solutions provide a continuum of support services paired with the **SMART** portal to help meet your organization's specialized needs.

Make contract management more **streamlined and efficient** across multiple strategic IT manufacturers such as:

### SMART Hardware Maintenance Offerings

### SMART Software Maintenance Offerings
