## GAIN BETTER INSIGHT, INTERACTION AND UNDERSTANDING

Every organization has a variety of business objectives that tend to be separated by unique business drivers, often resulting in disparate tools, processes and silos of information across cloud, SaaS applications and mobile devices, driving new points of interaction and data outside the traditional enterprise. This trend is leading organizations to realize the need for better understanding of their data, what's sensitive vs. what's not, and what needs to be protected.

This new enterprise requires solutions that go beyond the traditional approach to ECM and are not delivered through a single platform or technology, but a combination of methods and tools governed by an overall strategy and policies. Regardless of where, your content is managed and understood, Sirius can help your organization develop an effective content strategy based on proven methodologies, best practices and emerging technologies.

# ENTERPRISE CONTENT MANAGEMENT & GOVERNANCE SOLUTIONS

## DRIVING PRODUCTIVITY, BUSINESS AGILITY, AND BETTER BUSINESS DECISIONS

Organizations are faced with an ever-increasing volume of data, distributed silos of information, rising costs, lost productivity, and increased risk to regulatory compliance and data privacy. The solution to these challenges is not a single system or solution, but instead an overall program and strategy.

**Enterprise content management (ECM)** is a combination of processes and technologies that help turn data into business information. It collects and organizes data and content, and makes it easily accessible to the people who need it, when it's needed and while it's still relevant. A solid, comprehensive content management strategy drives productivity and efficiency across lines of business as well as operations.

**Information governance** drives compliance of corporate and regulatory policy, and ensures information is stored securely, retained properly and managed through well defined procedures. These policies help establish systematic, consistent and auditable processes that become the foundation for sound application of corporate policies, a key element of any effective content and records management program.

An effective ECM program can help your organization develop a strategy and roadmap to bring people, process and technology into a managed program that drives productivity, improves business insight, and reduces the overall cost of management and compliance.

## SIRIUS SOLUTION OFFERINGS

Sirius has over 15 years of practical enterprise content management experience, and proven methodologies for designing and deploying solutions that solve mission-critical problems, optimize business processes, and ensure compliance and governance of business content. From content solutions to governance and specific business solutions, our offerings encompass a full spectrum of ECM technologies for the public and private sector.

### Content Solutions

Sirius content solutions help clients transform the way they work by putting strategies into motion to capture, protect, activate, analyze and engage content for greater insight and action.

- **Imaging and workflow** allows you to capture documents and turn them into digital images to drive business processes based on content, context and user input.
- **Advanced data recognition** further extends imaging by automating the indexing of document metadata (through intelligent classification and data extraction), accelerating related business processes, improving data quality, and reducing the overall cost of operations.
- **Business content services** focus on content as a service through secure, enterprise-scale solutions that emphasize document sharing, multi-channel collaboration, and usability across the organization and with partners.
- **Enterprise search and content analytics** provide access and insight using conversational search and natural language support to find information in relevant context, regardless of where it exists.
- **Case management** includes line-of-business solutions designed to present the relevant information in context for content-related processes. Sirius offers case management solutions for accounts payable, employee onboarding and customer onboarding across a variety of industries, including financial, healthcare, oil and gas, utilities, government, as well as cross-industry clients.
- **Digital signature programs** help to ensure that proper and auditable consent has been secured, from simple email approvals to more complex external party verification with digital ink.
- **Robotic process automation** provides solutions to “swivel chair” integration, and allows for repetitive, high-effort tasks to be automated with minimal coding with minimal coding.

### Governance Solutions

Sirius governance solutions help clients manage their business information from creation to disposition, and addresses challenges in records management, electronic discovery, audit and compliance.

- **Records management** solutions address the full range of business content, from paper and electronic records to structured and unstructured data.
- **Defensible disposal** helps organizations determine information value and use and applicable retention, to enable the application of defensible disposal decisions that are executed efficiently and fully auditable.
- **Value-based archiving** aligns the cost of archiving large volumes of data with the value associated with that data.
- **Application retirement and consolidation** projects are made easier and safer with solutions for archiving data from decommissioned applications, to allow for better retention of data, queries and reporting.
- **Streamlined eDiscovery process** for legal stakeholders align it with IT to provide faster insight into data, and ensure that only the right information is collected.

### Consulting Services

Sirius consultants can assist your organization either in developing new or re-evaluating existing ECM strategies through assessments, roadmap development and planning. Other services include technical consulting for system performance, upgrade and migration. Our goal is to help your organization develop an effective ECM program that combines people, processes and technology into one effective solution that drives productivity, improves business insight, and reduces your cost of compliance.

## OUR DISCOVERY AND ASSESSMENT OFFERINGS

**Solution Discovery Assessment** is a complimentary evaluation designed to build an understanding of your high-level business and technical requirements, and develop the initial solution scope, timeline and costs.

**ECM Rapid Assessment** is designed to provide you with a high-level but clear ECM roadmap, strategy, and set of tactics. This services package is intended to rapidly deliver a high-level report that will assist you in generating business cases, and for communicating your ECM program and vision to steering committees, senior leadership and other stakeholders.

Working with your team and key stakeholders, Sirius will review and analyze your current state, overall business objectives, opportunities for ECM business value, and challenges to overcome. The findings from this activity will be used to generate an ECM roadmap, strategies and quick-win tactics to achieve your ECM business objectives.

Included with this report is an overview of the business benefits and returns that can be earned from implementing the roadmap. Sirius will also present tactical “quick wins” that can be immediately implemented to begin realizing value.

**Records Management Rapid Assessment** is designed to provide a high-level analysis of your current records management program and activity including policies, procedures, teams, infrastructure, standards, materials, implementations, governance and current issues.

Through an iterative approach with your organization, Sirius consultants will build out:

- A high-level strategy and roadmap for an effective and efficient RM program.
- A set of tactical next steps to help start mitigating your RM risk.

The intent of the engagement is to help you generate a business case and communicate the needs and value of an effective records management program to steering committees, senior leadership and other stakeholders.

## OUR PARTNERS

Sirius works with leaders in the ECM marketplace, including application vendors such as IBM, Kofax, and Box. Sirius also partners with leading storage, analytics, big data and security solution providers, giving us a unique ability to expand to a broader information management strategy and solutions across the enterprise.
