

SIRIUS' BUSINESS AGILITY SOLUTIONS

Our team of experienced and certified agility solution consultants help clients evaluate, acquire and adopt the solutions they need to achieve their business goals and stay ahead of the competition. Sirius offers these agility-enhancing services:

- Flexible Application Integration (cloud and internal)
 - Cloud Application Development
 - Digital Business Automation
 - Development and Operations (DevOps) Delivery Automation
-

BUSINESS AGILITY SOLUTIONS OVERVIEW

ADAPTABILITY, FLEXIBILITY & EFFICIENCY FOR YOUR BUSINESS

In today's fast-paced world, organizations must quickly respond to change and opportunity. Unlike traditional software development approaches, an agile business empowers end consumers through flexible systems that change as the business environment and consumer needs evolve.

Business agility is a must for companies looking to achieve or retain a competitive advantage that supports innovation and growth, including higher-quality solutions that fulfill customers' needs more rapidly. For long-term agility, businesses must remain adaptable, flexible and efficient.

Sirius offers business agility services that can be customized to meet the unique needs of your business. Our national software and process experts utilize a collaborative approach for solution planning and providing the development, implementation, adoption and high-level technical support that your organization needs.

MULTI-SPEED IT CONCEPT

Due to the increasing rigor required to support more frequent and demanding software updates on the front-end, agile concepts are most effective when applied in a way that leverages the high-value back-end assets without destabilizing those assets. Embracing a multi-speed IT environment with application integration, cloud application development, digital business automation, and DevOps automation improves your organization's business agility.

APPLICATION INTEGRATION

Imagine an enterprise-grade framework that is less fragile and better equipped to leverage your existing resources, and connects your applications to one another and the outside world.

Benefits of Sirius Agile Integration

- Separates integration tasks from business value work
- Manages and secures application program interfaces (APIs)
- Enables developer self-service, while offering security and control
- Leverages and extends systems and data, which opens new markets for mobile and in the cloud

Integration Platforms

- Cloud-based integration services
- API connection and management tooling, Power Appliances for high-speed, security and integration
- Enterprise service-bus technology

CLOUD/CUSTOM APPLICATION DEVELOPMENT

In many cases, custom applications provide an excellent foundation for the continued success of businesses.

Benefits of Sirius Agile Application Development

- Addresses your unique business requirements
- Leverages new technologies in the cloud, while preserving investments in legacy systems and applications
- Eliminates manual processes that result in higher effort and cost
- Extends to support new lines of business, products and services
- Improves responsiveness and shortens time-to-market
- Decreased cost potential through short term and/or offshore resourcing

Custom Solution Development Platforms

- IBM Cloud (formerly Bluemix) PaaS for cloud or hybrid applications
- Java, .NET, Node.js
- Custom software chatbots

DIGITAL BUSINESS AUTOMATION

Monitor, evaluate, control and improve the way workflows through and across the enterprise.

Benefits of Sirius Agile Automation

- Reduce errors
- Real-time visibility and process control
- Automatically prioritize and route work
- Reduces manual interactions by up to 80%
- Redirect valuable assets to create high-value outcomes
- Leverage existing systems/data

Automation Platforms

- Blueworks Live, Business Process Manager, Operational Decision Manager, PureApplication System
- Robotic Process Automation (RPA)
- Process and decision management

DEVOPS DELIVERY

Modernizing and automating your development life cycle will achieve the collaborative testing, deployment, and monitoring capability essential to making your development team more effective and competitive.

Benefits of an Agile DevOps Organization

- Collaborative environments to store assets, tasks, and issues
- Visibility to the overall health of the code
- Higher quality via automated unit testing with continuous code validation
- Automated, error-free, and uniform deployments
- Interchangeable software tools that provide the best solution to fit your DevOps strategy
- Continuous performance testing and security vulnerability testing
- Continuous monitoring and feedback of your deployed applications

DevOps Platforms

- IBM Cloud (formerly Bluemix) and Amazon Web Services (AWS) for cloud and hybrid environments
- IBM and Open Source Tooling, DevOps and agile processes best practices
- Development team support and monitoring tools
