

SOLUTIONS FOR HEALTHCARE ORGANIZATIONS ACROSS THE IT LIFE CYCLE

There's plenty of technology out there, and plenty of projects competing for your organization's time and money. Sirius can help you manage them efficiently and cost-effectively throughout the entire application and/or technology life cycle. Regardless of whether you are launching a specific project such as an EHR, telemedicine or mobility solution, or in the process of an entire infrastructure strategy that spans your organization, Sirius can help.

To ensure your success, Sirius employs dedicated professionals who have expertise throughout every step of the technology life cycle. We also partner with the world's top hardware, software and services providers to make sure you have all the resources you need to put in place a best-of-breed solution. We offer asset management and maintenance services to keep ongoing costs down and maximize the ongoing use of your systems and software. We even partner with top financing organizations to source not only competitive leasing and financing options, but also asset retirement services to help you recover the maximum value from items your organization no longer needs, and to minimize hassle.

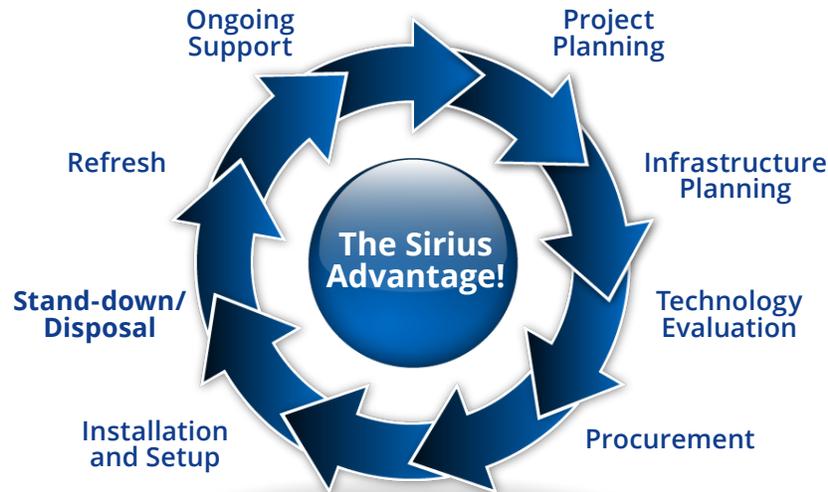

If your healthcare organization is considering the implementation of a new project, the best place to start is with detailed project planning to ensure a successful cycle of evaluation, acquisition and implementation. In most cases there is already partial or full infrastructure in place that must be augmented, maintained or retired before refreshing it with new technologies. Sirius consultants' with the healthcare industry, as well as vendor-agnostic expertise with hardware platforms and software solutions, gives them unmatched perspective to determine the most efficient and cost-effective solution for your organization's unique needs, regardless of where you are in the IT life cycle.

UNPARALLELED EXPERTISE REGARDLESS OF WHERE YOU ARE IN THE TECHNOLOGY LIFE CYCLE

The IT life cycle is an ongoing process of identifying existing assets and business goals, and progressing the solution through its entire useful life, making adjustments along the way to keep up with changing technologies and business objectives. In such a dynamic environment, it's essential to partner with a solutions integrator that understands your objectives, current and developing technologies, processes for successful implementation and ongoing operation, and the role partners can play throughout the process.

Project Planning includes budgetary quotes, project management and research

Infrastructure Planning includes technology roadmaps, architecture planning and governance

Technology Evaluation includes proofs-of-concept, testing and selection

Procurement includes RFI/RFP, supply chain, ordering and delivery

Installation and Setup includes technology installation, testing and validation, hosting, and data center services

Stand-down/Disposal includes technology shutdown, ship out, and secure disposal

Legacy Operations includes day-to-day operations, and legacy application operations

Refresh includes technology refresh and upgrades

Ongoing Support includes remote monitoring, maintenance and support, and patches

Regardless of where you are in your technology life cycle, speak with your Sirius representative to learn more about how we can help.
