

SIRIUS STORAGE SOLUTIONS

Sirius provides storage solutions that help increase the reliability, availability and efficiency across storage environments of all sizes.

Sirius offers:

- A team of certified storage specialists who will design and configure the ideal hardware and software for your IT environment.
 - A dedicated, certified client advocate who will coordinate and perform solution assurance reviews.
 - A certified team of technical consultants who perform fee-based services for your specific storage requirements.
 - A state-of-the-art software-defined data center showcasing a variety of systems, storage and software from our industry-leading partners.
 - Experience and expertise in cloud solutions, storage consolidation and virtualization, high availability, backup/recovery, archive, security, and more.

MANAGE THE INCREASED VOLUME, VARIETY AND VELOCITY OF STORAGE

The rate at which data is growing isn't going to slow down — if anything, it will continue to accelerate as it has until now. And in coming years, new data types will almost certainly continue to add to the burden on our networks, storage systems and administrators.

The best — and most cost-effective — storage strategies for responding to these coming challenges will be those that stress virtualization, deduplication, manageability and commodity hardware, while providing enhanced security that doesn't burden system performance or administrator workload. Sirius is committed to supporting solutions from today's leading storage partners. Our certified, experienced storage specialists can help you:

- Optimize your existing storage investments
- Adhere to security regulations and industry compliance
- Modernize your architecture to support business-critical outcomes
- Transform your storage strategy to address long-term data growth

Sirius' storage mission is to educate, collaborate with and provide thought leadership to clients by architecting storage solutions that support business and IT initiatives. The modern IT era has changed everything. Sirius experts are focused on helping you navigate the data revolution. We partner with the world's top storage providers including IBM, Cisco, Dell, NetApp, HPE, VMware, Pure Storage and multiple data protection partners. Our team takes an agnostic approach to storage, matching our clients to the right solutions to fit their unique infrastructure.

SIRIUS STORAGE FOCUS AREAS AND CLIENT BENEFITS

Hybrid cloud software-defined storage: Sirius provides a balanced IT strategy with private, hybrid and public cloud models driven by security, flexibility, and rapid provisioning.

Enterprise-class solutions: Provide high performance and continuous availability for mission-critical workloads. Create new value by incorporating unique functionality provided by the latest products.

Backup as a Service (BaaS): Sirius BaaS solutions allow you to focus on your core business priorities while retaining ownership of your backup technology.

Data protection: Protect yourself from information breach and loss while improving compliance with accelerated performance and cost-savings.

Data management: Optimize the placement of data while providing a fail-safe way to audit, locate and retrieve data when needed.

Storage optimization: Evaluate the capabilities of your existing storage infrastructure to create a roadmap for growth. Gain a better understanding of existing capabilities that can meet new requirements.

LET US HELP YOU CREATE A PLAN

SIRIUS TECHNOLOGY ENABLEMENT CENTERS (TECs)

When technology is so critical to your business, why invest in information technology (IT) without knowing how well it can deliver? At a Sirius Technology Enablement Center™ (TEC™), you can analyze your current business and IT processes, experiment with a range of hardware and software options, explore the potential of IT solutions, and identify opportunities for improving business performance.

SIRIUS SDx INNOVATION CENTER

The Sirius SDx Innovation Center (SDxIC) provides our clients with a venue in which the adoption and integration of new technologies can be vetted and proved. It's equipped to allow the deployment of new SDx technologies alongside more traditional infrastructures in order to proof migration paths or coexistence strategies. The center is staffed by highly experienced architects who are skilled across all data center disciplines.
